

The psychrometric chart displays the following data points and process:

- State 21:** Initial state at approximately $h = 590 \text{ kJ/kg}$ and $x = 0.10 \text{ kg/kg}$.
- State 22:** Final state after cooling and dehumidification at approximately $h = 670 \text{ kJ/kg}$ and $x = 0.03 \text{ kg/kg}$.
- State 23:** Saturation point at the same humidity ratio as state 22, located on the saturation curve at approximately $h = 350 \text{ kJ/kg}$.
- State 24:** Saturation point at the same enthalpy as state 21, located on the saturation curve at approximately $h = 350 \text{ kJ/kg}$ and $x = 0.01 \text{ kg/kg}$.

The process line 21-22 is a straight line, indicating a constant wet-bulb temperature process. The chart also shows various constant temperature (dry-bulb) and constant humidity ratio lines.
